

Storage Tanks

- Permanent watertight storage
 - Up to 15 psi rating
 - Unlimited size range – 10,000 to 1,000,000+ gallons

Rainwater Harvesting

Rainwater harvesting is an important tool to help meet stormwater runoff reduction requirements. Contech's UrbanGreen® Rainwater Harvesting System has all the components necessary to build an effective water re-use or runoff reduction practice.

Combined Sewer Overflow

Combined sewer overflow (CSO)/Sanitary sewer overflow (SSO) discharged during heavy rain events are known to cause serious water pollution problems. Many communities are turning towards solutions such as CSO/SSO detention or storage.

Detention

Detention systems are employed on a site to reduce the quantity of stormwater runoff leaving a site by temporarily storing the runoff that exceeds a site's allowable discharge rate, and releasing it slowly over time.

Glycol

Airport deicing operations are generally equipped with storage for glycol and are configured to prevent applied glycol from flowing into stormwater runoff. Contech's SRPE storage tanks provide leakproof storage of pure glycol, and can also be utilized to capture and store glycol runoff.
