

Complete Development Solutions

AESTHETIC »

From vehicular and pedestrian bridges to arch systems and retaining walls, Contech products are designed to appeal to a wide range of aesthetic sensibilities.

DURABLE »

Benefit from a variety of available products and systems, proven by more than 100 years of experience. We've designed them so they're easy to install and built to last.

CUSTOMIZED »

We've personalized a number of residential and commercial developments, from luxury home estates to shopping centers. Regardless of the climate you're building in – we're eager to help you create a distinctive development.

ENHANCED »

Add a whole new dimension to your development with products and solutions provided by Contech Engineered Solutions!

Palmetto Bluff »

South Carolina

THE DILEMMA

Palmetto Bluff, in Bluffton, South Carolina, needed several bridges that would fit the aesthetic appeal and eye-catching designs of the 20,000-acre community. Developers wanted Palmetto Bluff to appear as an island so the residents would feel like they were leaving the hustle and bustle of the mainland and crossing over to serenity.

THE SOLUTION

Contech provided a total of six truss bridges – three vehicular and three pedestrian – to connect the mainland to the village.

The Villages »

Florida

THE DILEMMA

The town of The Villages, Florida, is a master-planned community built in an area where Florida's sandy and wet soil conditions appear too challenging for residential construction. One of the bigger issues in the development of this town was providing a route leading across a large waterway and into the heart of the community.

THE SOLUTION

Keystone Country Manor, with its hand-laid stone appearance, allowed town developers, The Villages of Lake Sumter, Inc., to build on their vision of quaint, historic-Americana charm for this planned-community site. provided a beautifully aesthetic and structurally supportive veneer to a ten-barrel, horizontal-ellipse SUPER-SPAN™ system requiring only minimal subgrade remediation.

The New Town at St. Charles Development »

Missouri

THE DILEMMA

The New Town at St. Charles is a unique, pedestrian friendly neighborhood. Site planning firm DPZ saw the advantages of designing the development around a series of lakes, which could contain stormwater runoff and provide a dramatic and active waterfront.

THE SOLUTION

Three identical Continental® pedestrian bridges have been installed to provide access and connectivity throughout New Town. The aesthetic structures were essential in maintaining the 'walkability' aspect that New Town conveys.
