ULTRA FLO® Spiral Rib Pipe
The Storm Sewer System of Choice

ULTRA FLO vs. Polypropylene Pipe

ULTRA FLO from Contech Engineered Solutions has over 30 years of in-ground performance. With a wide range of diameters, longer lengths, and custom fittings to meet your site conditions, ULTRA FLO storm sewer systems will be able to save a substantial amount of both time and money.

ULTRA FLO Spiral Rib, Manning’s ‘n’ 0.012

24-in. PP interior before dead load applied.

24-in. PP interior after dead load applied.
Please consider this a formal request for your review and approval of Aluminized Type 2 (ALT2) Spiral Rib Pipe for storm sewer application and inclusion into this project. Contech Engineered Solutions proposes to furnish this pipe as an alternate to the project specified material.

ALUMINIZED TYPE 2 SPIRAL RIB PIPE:
1. Significant material cost savings
2. Fast lead times
3. Installation advantages offered by lightweight pipe in long lengths
   a. 48” spiral rib pipe is 49lbs/ft, coupled with 24 ft lengths means maximum production value
   b. Utilize lightweight equipment
   c. All junctions, fittings, manholes, grate inlets, etc. can be handled “in-line” as a fabricated fitting – “Feels like another piece of pipe…”

ALUMINIZED TYPE 2 SPIRAL RIB PIPE FOR STORM SEWER

1.0 GENERAL
This specification covers the furnishing, installation, and design considerations for Aluminized Type 2, Spiral Rib Pipe and Pipe-Arch for culverts and storm sewers for the types, sizes, and designations as shown on the plans.

2.0 MATERIAL
The pipe shall be fabricated from an ALUMINIZED Type 2 coil, conforming to the requirements of AASHTO M 274 or ASTM A929.

3.0 PIPE
The pipe and pipe-arch shall be manufactured to conform to AASHTO M 36 or ASTM A760. The pipe shall have a helical corrugation pattern, and shall have the sectional properties per AASHTO Section 12.5.4.1 or ASTM A796

4.0 COUPLING BANDS
Coupling bands for the pipe and pipe-arch shall be made of the same base metal and coatings as the pipe and pipe-arch. The bands for the round pipe (18”-48” diameter) shall be a minimum of 16 gage, 12” wide Bell and Spigot Joint with a Fluted Gasket. Hugger bands and fully corrugated bands for round or pipe-arch shall be a minimum of 18 gage, 12” wide bands with annular corrugations that are spaced to properly index with re-rolled corrugations of the pipe.

5.0 INSTALLATION
The pipe shall be installed in accordance with AASHTO Section 26, Division II or ASTM A798.

6.0 HYDRAULICS
Values of Coefficient of Roughness (Manning’s “n”) will not exceed 0.012 or that recognized by other materials.

7.0 STRUCTURAL
Material thickness will be determined based on AASHTO Section 12 and specific loading conditions. For highway loading, minimum Height of Covers are 12”, 15” and 18” for up to and including 48” diameter, 54” to 60” and 66” to 72” diameter pipes, respectively. Further consideration can be made for pipes exceeding 72” diameter.

8.0 DURABILITY
Aluminized Type 2 pipe provides a minimum service life of 75 years in the appropriate environment. (5.0 ≤ pH ≤ 9.0, r > 1500 ohm-cm) Considering the application for use is pavement surface runoff with select backfill, it is anticipated that a minimum service life of 75 years will be achieved.
