Notes:

1. The species listed are drought tolerant and have applicability to bioretention due to shallow root zones.

									Filtterra w/ Tree Grate	Filtterra Bioscape	Filtterra w/ Full Grate

2. It is the purchaser's responsibility to verify the local Hardiness Zone and source plants that are readily available. For a desired species not listed, please contact Contech for suitability.

3. Mature height and spread do not reflect plant size at planting / system activation.

4. All plants utilized in Filtterra systems shall be container grown in containers not to exceed 15 gallons.

5. Contech promotes the use of non-invasive species in Filtterra systems, and has made efforts to maintain a plant list free of invasives. However, always check with local sources, as some species listed (even natives) may be invasive in some regions and not others.

6. All Filtterra vault systems incorporate a ponding depth ranging from 12"-36" between finished grade and media surface. For systems with more than 18" from finished grade to media (FTIBC, FTIBP, FTPD, etc), Contech recommends choosing a species with "Sizing" noted as "XL" or "Tree".
