

RELINE & REHABILITATION

- Reline drainage structures with hydraulically efficient pipe solutions, such as DuroMaxx® SRPE, ULTRA FLO®, Smooth Cor™, CORLIX®, or A2™ Liner PVC.
- Erect Contech plate structures inside existing bridges and large culverts is simple as the plates and ribs are easily bolted together to form various shapes: round, vertical and horizontal ellipses.
- Line inadequate or failing structures with corrugated metal or plastic pipe uses little of the available area, preserving the maximum amount of the original opening.
- Contech offers a variety of products and systems, combined with more than 100 years of experience, to facilitate rehabilitation of storm and sanitary sewers, culverts and bridges

Miami County Reline, KS – This emergency rehabilitation project provided the structural integrity desired with a minimal decrease in hydraulic capacity (MULTI-PLATE)

I-64 Huntington, WV – avoid road closures in your rehabilitation efforts with a precast buried bridge (BEBO®)

I-675 Culvert Reline, OH – provide optimum shaft stability and protection relining structures under roads (Tunnel Liner Plate)

Brook Forest Road Cross Culvert, CO – reline aging culverts to provide exceptional flow and structural integrity (ULTRA FLO®)

Mobile Regional Airport Runway, AL – segmental sliplining can be installed without interrupting flow line or traffic, providing substantial cost-savings (DuroMaxx® SRPE)
